

## THE TRAINING NEVER STOPS AT SIDERFORGEROSSİ

17 January 2017, Arsiero – ITALY

### Superalloy Seminar

On Tuesday 10 January 2017, Prof. F. Bonollo of the University of Padua's Department of Management and Engineering (DTG) was welcomed to the boardroom of the Siderforgerossi Group. There, he gave a talk on the main metallurgical aspects of Superalloys before an audience of around 30 members of staff from the group's Research and Development (R&D) and quality control teams and its ISO 17025 certified technological laboratory.

It was all part of the company's current efforts in the field of nickel-based and other alloys, with the goal of ensuring that the staff can work and operate highly proficiently and show the utmost professionalism as they carry out the necessary mechanical and metallurgical analyses for Superalloys.

There was a broad, in-depth discussion of matters relating to grain strengthening mechanisms and the implications in terms of mechanical strength and creep, as well as assessments of the various resistances to oxidation, corrosion and high temperatures, not to mention the different properties produced by different alloy elements.

The training never stops at Siderforgerossi: we strive to guarantee exceptional quality for our customers and that is something that goes hand in hand with the level of expertise of the designated personnel, so we take all of the measures necessary to ensure that our staff are properly trained. Great dedication on this front is shown at every level of the company. Additional training sessions are scheduled to take place on a quarterly basis throughout 2017.

The Siderforgerossi Group is extremely proud of its current partnership with the University of Padua and the part that it plays in this industrial sphere. The Siderforgerossi Group would like to offer Prof. Bonollo its heartfelt thanks for his invaluable contribution.
