

AIM AND SIDERFORGEROSSI “FORGE” FORGERS

3 April 2017, Arsiero, Italy

Forging Course

Having taken part in the 2012 and 2014 editions, Siderforgerossi has confirmed that it will be back for the 3rd “Forging Course”. The “Industry 4.0” concept will be at the forefront once again and the course will also focus on productivity and process control parameters, which play an essential part in building up expertise, achieving results and competing on international markets.

The event has been organized by the Forging Study Centre at the Italian Metallurgy Association (AIM) and it will be held in Brescia on 6, 11 and 12 April, in the Boardroom of the Mechanical Engineering Department at the University of Brescia.

As an associate company, Siderforgerossi will give a talk on “ISO/IEC 17025-certified laboratories and NDT” and discuss the relative advantages and disadvantages.

Testing laboratory accreditation is essential because it enables companies to guarantee high quality and therefore offer a better standard of service to customers, whose needs are a top priority for Siderforgerossi.

As an accredited company, Siderforgerossi will take part in the event and make an educational contribution to

the academic world. It will share its experience of implementing the UNI CEI EN ISO/IEC 17025:2005 standard and show that a key role in future development is played by reliable service and regular contact with customers.
