

# SIDERFORGEROSSİ GROUP

12/02/2020, Arsiero – ITALY

The Siderforgerossi Group is proud to announce that it was recently awarded its first two NADCAP™ certificates for special heat treating and magnetic particle inspection processes for forged aerospace products. This prestigious form of accreditation is bound to bring significant new opportunities.

NADCAP™ (the National Aerospace and Defense Contractors Accreditation Program) is an international cooperative scheme for the leading companies in the fields of aerospace engineering and defence. It aims to

establish universally recognized accreditation methods for all processes that are considered special, and to promote ongoing improvement in them.

Following a conference between industry representatives and the US government in November 1989, PRI (the Performance Review Institute) was established as a not-for-profit trade association to ensure that aerospace products meet technical and quality requirements. PRI is still the global authority in its field today and the NADCAP™ certification system has built up such an peerless reputation that all of the top companies in the industry have their Special Processes accredited.

NADCAP™ is an industry-managed approach to conformity assessment that brings technical experts from the field (including members of our team) together with public bodies to establish prerequisites for accreditation, assess suppliers and set out operating requirements. It has given rise to a standardized approach to assess the conformity of special processes in accordance with the requirements of “Prime Contractors” in the aerospace industry, many of which they all share. This helps to rationalize the number of audits.

Siderforgerossi has already made substantial investments in this strategic initiative as part of its aerospace development plan and earned itself worldwide renown as an exceptional partner. The NADCAP™ accreditation not only certifies that the Siderforgerossi Group has the technology needed to carry out special processes in-house, but also – and most importantly – attests that its staff are outstandingly qualified and thus capable of properly following industry rules, thanks to the strict process quality management system that is in place. All of this offers further proof of the superior quality of the forged products that we make for our clients!

Being NADCAP™ approved means that we can seize new market opportunities while pursuing quality objectives. Furthermore, it will lead to growth and development, underlining our desire to be one of the world’s leading names in forging, closed die forging and rolled products...

...We can’t wait to have you on board!
