

SIDERFORGEROSSIGROUP ENTERS THE AEROSPACE WORLD

16 October 2017, Arsiero - ITALY

AS/EN/JISQ 9100:2009 Certification

The aerospace mission has begun: on 22 May 2017, Siderforgerossi was awarded an AS/EN/JISQ 9100:2009 certificate.

The AS/EN/JISQ 9100:2009 standard was drawn up by the Aerospace and Defence Industries Association of Europe and based on the ISO 9001:2008 standard but with stricter analysis of associated risks on assembly lines and potential manufacturing defects. The certification is extremely valuable and obtaining it is an essential prerequisite for suppliers of the aerospace and defence industry. It confirms that Siderforgerossi meets the necessary requirements as a manufacturer of forged products.

The company has every confidence in its future success and it has already started a number of significant development

activities at the Busano Canavese facility near Turin. It has put together a team of experts in fields such as design and production to ensure that supply quality requirements are met and minimize risk factors.

The members of the technical team have already shown that they have the right professional capabilities for the job by obtaining the certification in record time. Furthermore, they have proved to be close-knit, professional and cooperative.

The staff involved have refined the existing quality system by establishing meticulous methods to control every single detail in the production cycle, starting with the selection of the raw materials. They have carefully assessed all of the different production stages. In order to qualify for such an

important certificate, it is necessary for a company to show that it has the resources needed to implement and maintain a quality management system and that it is capable of enhancing its effectiveness on an ongoing basis. This all leads to greater satisfaction levels among customers, as all of their requirements are painstakingly

met.

Parts in the process are played not only by the production departments - which are required to work responsibly and professionally - but also the management team, which is helping to ensure that the work on the development and effectiveness of the products continues at a steady pace.

The next step will take us towards certification under the Nadcap standard, which is internationally recognized by the leading companies in the aerospace industry and involves observation of heat treating and forging processes. The “Nadcap project” will be based on a detailed plant and process Gap Analysis and it will really allow Siderforgerossi to “soar” to new heights.
